

Car Lights Special Coating Machine

Car lights special coating machine is including horizontal and vertical structure according to chamber type. The main functions of this machine are high-voltage ion bombardment and finishing aluminum coating and protection coating (Sio) in the chamber at one time. Super - hard coating enhances resistance of aluminum coating and maintains the aluminum film's long - term high reflectivity. The reflective coating for headlights have reached the national test standard. The coating has passed by acid test, salt test and alkali-resisting test. etc. The machine is using computer control, monitor operation and process monitoring, which have improved production efficiency, ensured the stability and consistency of product quality, reduced the impact of human factors.
